I - DOWNLOAD

1. Log in to your Codecanyon account, choose "Download" from the menu
Or head to <https://codecanyon.net/downloads>

2. Click "Download" button on item you want to download

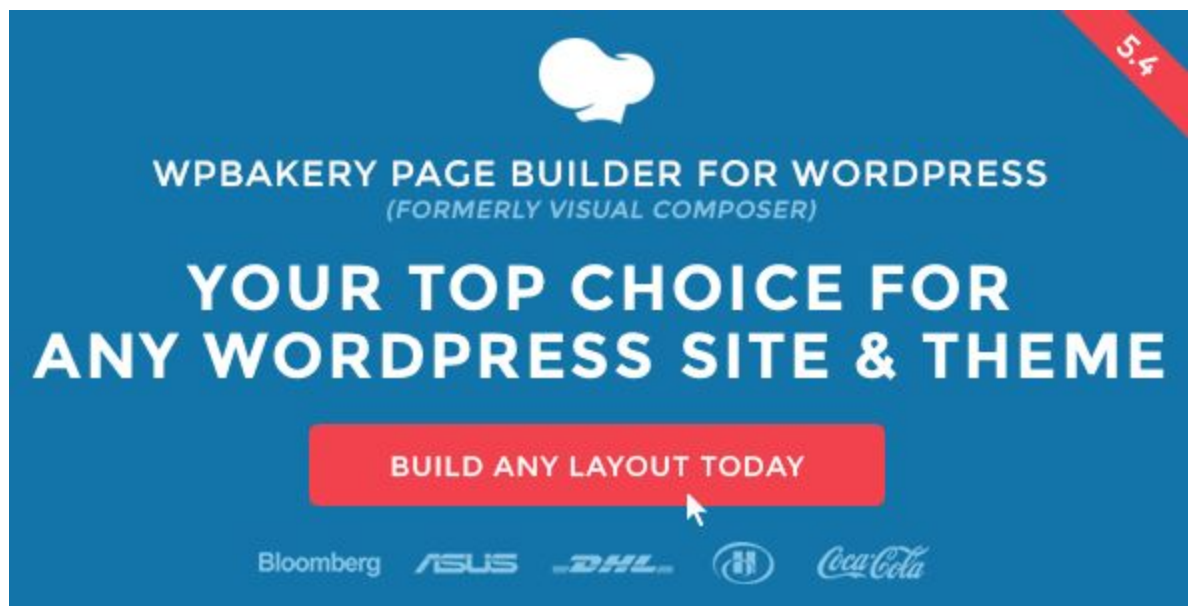

3. Extract the zip file to your computer.

4. Done

II - INSTALLATION

1. Install **WPBakery Page Builder**

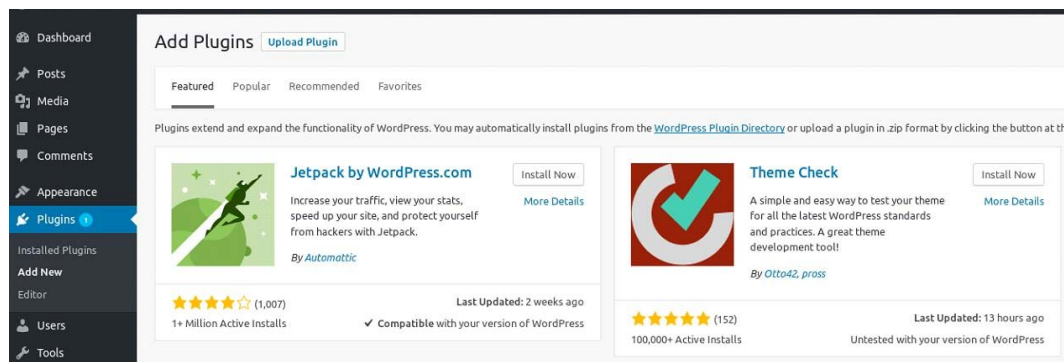

WPBakery Page Builder is a page builder for wordpress. To use this plugin please install WPBakery Page Builder first: [Codecanyon WPBakery Page Builder](#)

2. Install & active **VCKit** plugin

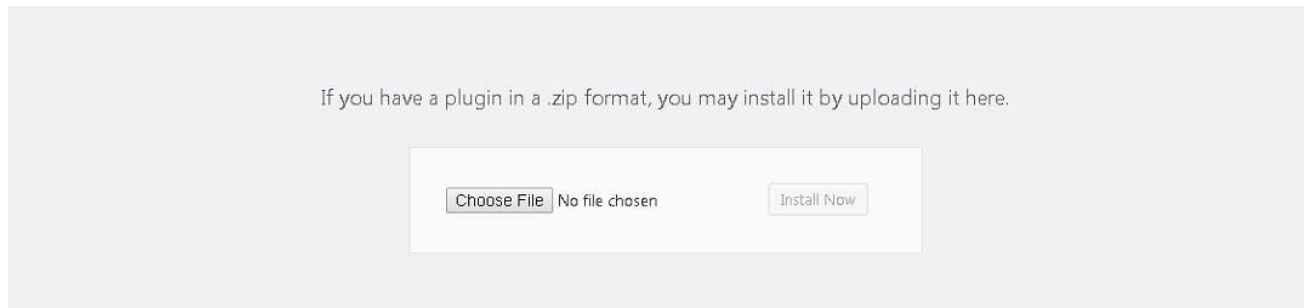

Login to your Wordpress admin dashboard >> Plugin >> Add new then:

- Click "Upload" plugin

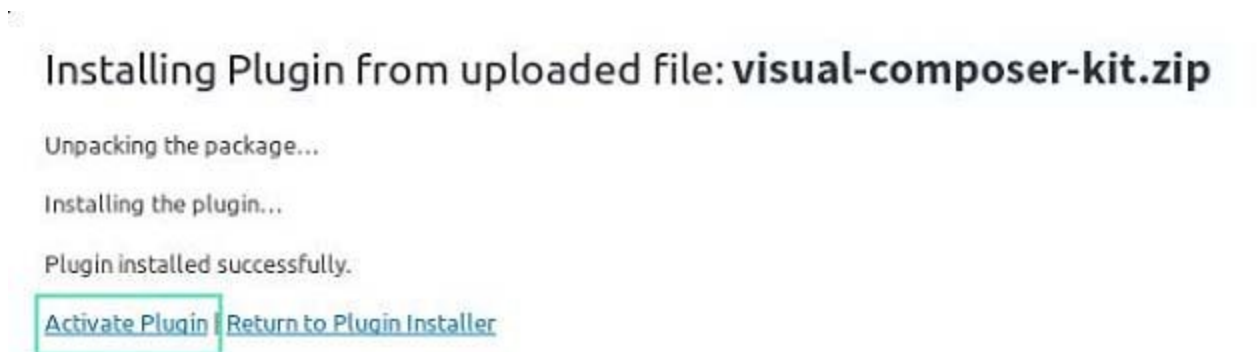

- Click "Choose file"

Then inside the package Visual Composer Kit you downloaded from Codecanyon, choose file ***visual-composer-kit.zip***.

Note: you need to extract the zip file downloaded from Codecanyon to find the right file to upload.

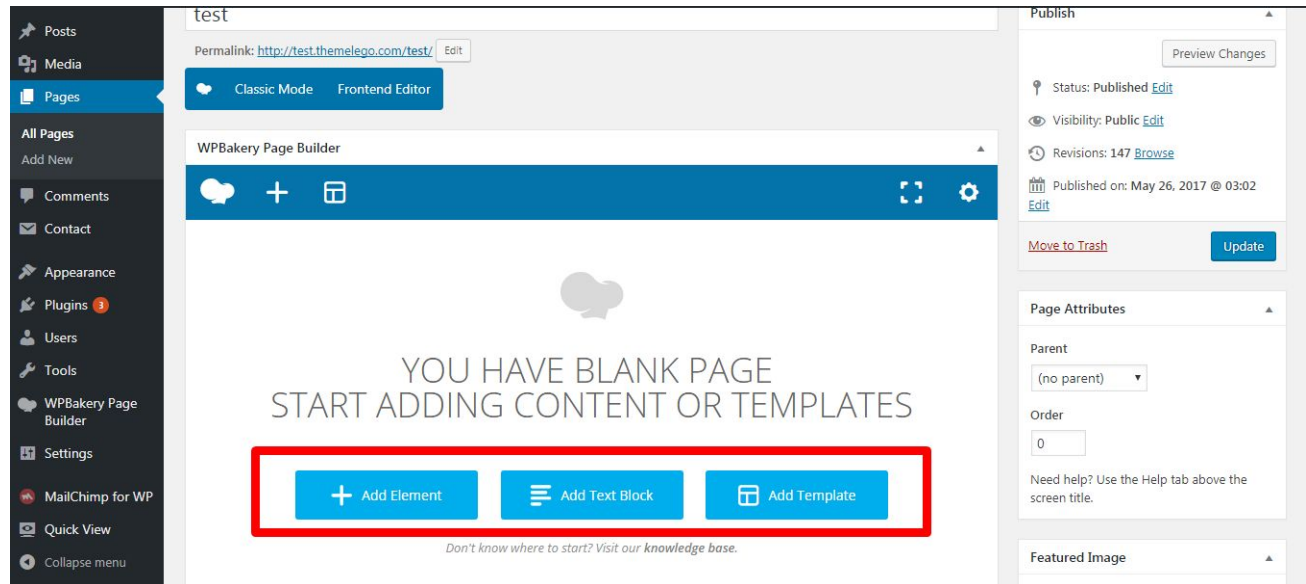

- Click "Install now"
- Activate plugin

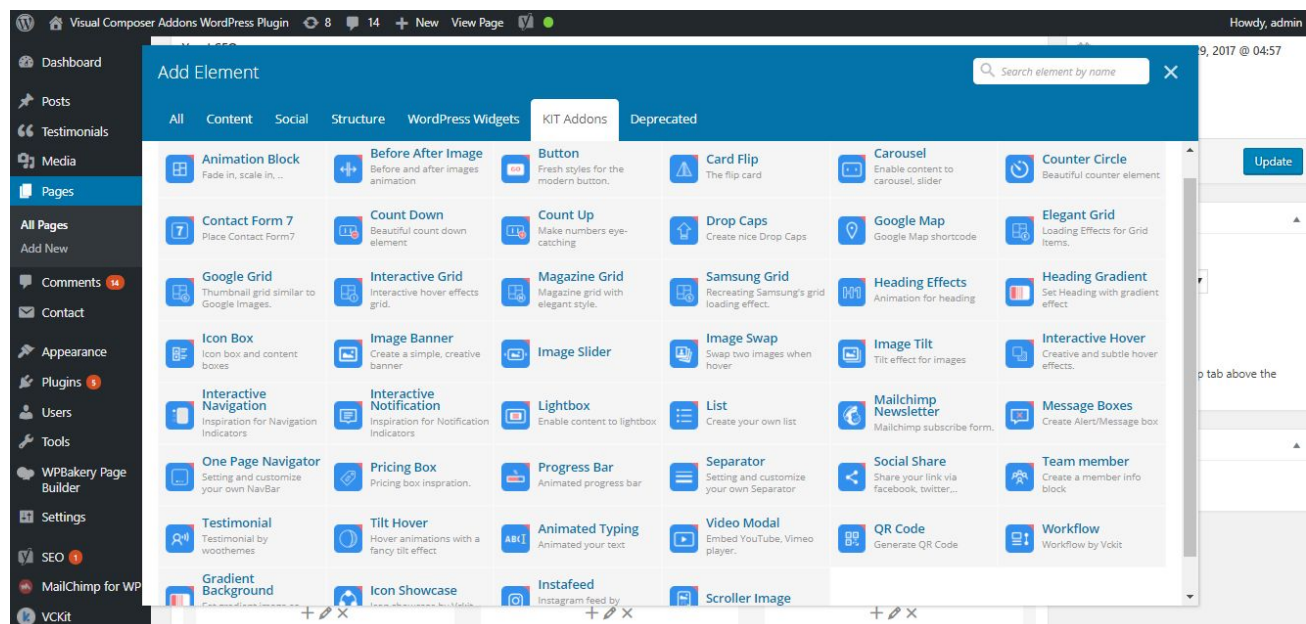

Done.

III - CONFIGURATION YOUR WEBSITE

1. Create a new page with WPBakery Page Builder plugin
Edit with Backend Editor (or Frontend editor) > Add Element

3. Go to "KIT Addons" tab

Details about each addon are below:

List of VCKit's Elements

No.	Logo	Element	Description	Demo Link

47		<u>Google Grid</u>	Display your content grid in Google Search style	http://vckit.themelego.com/grids/google-grid/

4. Save changes and Publish! All done!

Detail Instruction

1. Interactive Hover

This element is actually [Marvelous Hover Effects](#), so you can read its [documentation](#) or watch [tutorial video](#) for more instruction.

2. Mailchimp Newsletter

- **Installing plugin**

In your WordPress admin panel, go to *Plugins > Add New*, search for [MailChimp for WordPress](#) and click “Install now”.

Alternatively, download the plugin and upload the contents of mailchimp-for-wp.zip to your plugins directory, which usually is */wp-content/plugins/*.

Activate the plugin.

- **Configuring Sign-up Form(s)**

Go to *MailChimp for WP > Form*

Select at least one MailChimp list to subscribe people to.

(Optional) Add more fields to your form using the add MailChimp field dropdown.

Embed a sign-up form in pages or posts by using the `[mc4wp_form]` shortcode.

Show a sign-up form in your widget areas using the “MailChimp Sign-Up Form” widget.

Show a sign-up form from your theme files by using the following PHP function.

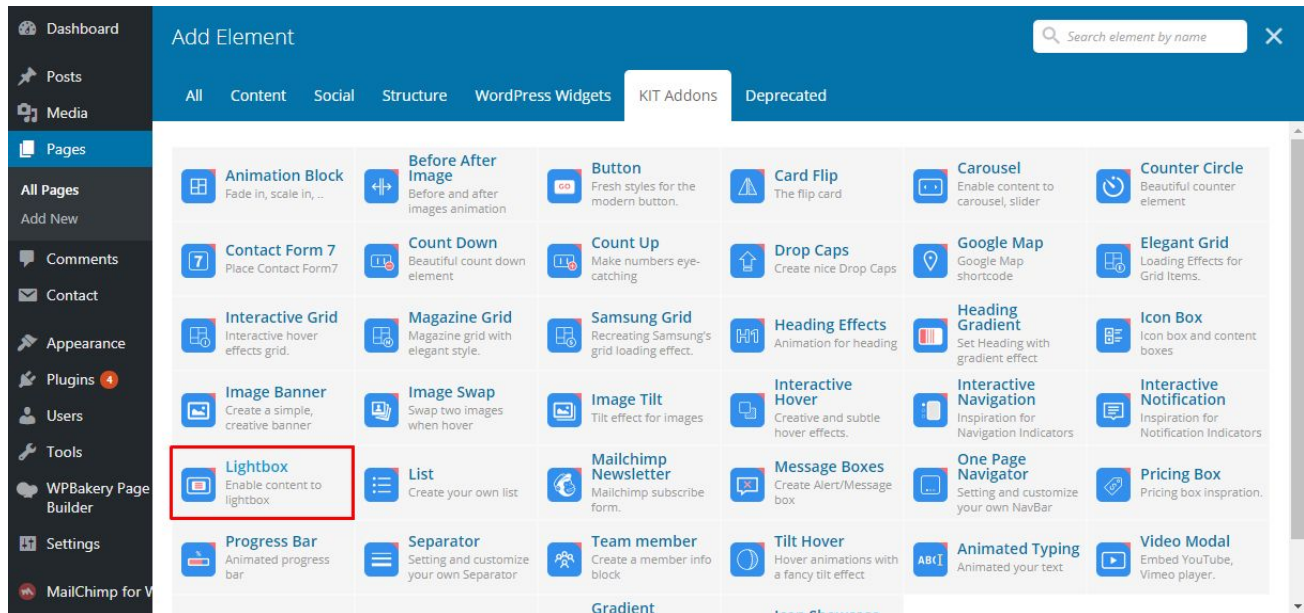

```
<?php
if( function_exists( 'mc4wp_show_form' ) ) {
mc4wp_show_form();
}
```

[Wonder how to add Mailchimp Newsletter Sign-up Form to WordPress using WPBakery Page Builder Addon? Click here to watch tutorial video!](#)

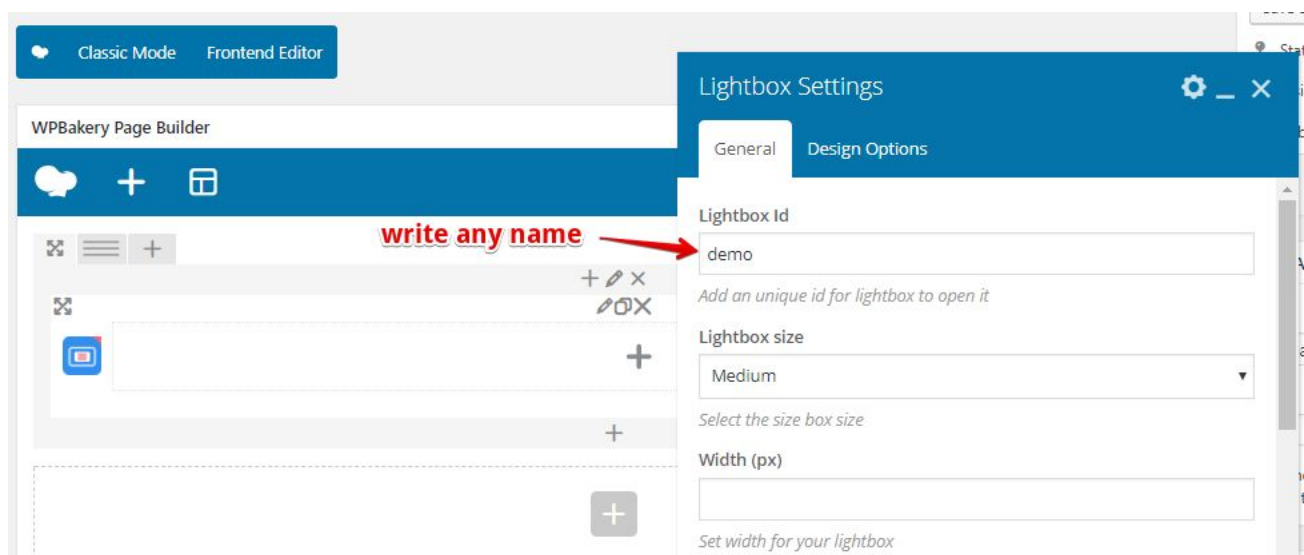

3. To master Lightbox in 1 minute!

For better instruction, take a look at our tutorial video [here](#)!

- First, make sure to add "Lightbox" element into WPBakery Page Builder back-end editor (located in *KIT Addons* tab)

The "Lightbox Settings" panel will open > Set the Lightbox ID. You can type any name you want, this ID helps a button (or anything can open a link) to identify which lightbox to open.

Click "+" to add any element inside lightbox. Or you can drag element into it.

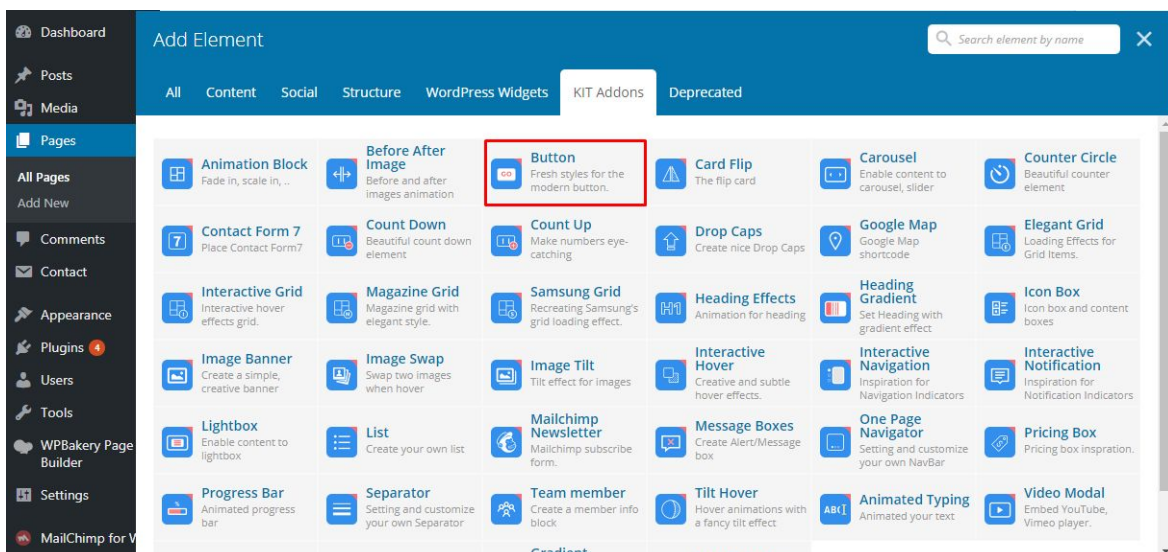

Done. You've successfully created a Lightbox.

- Next, let's create a button to open this lightbox!

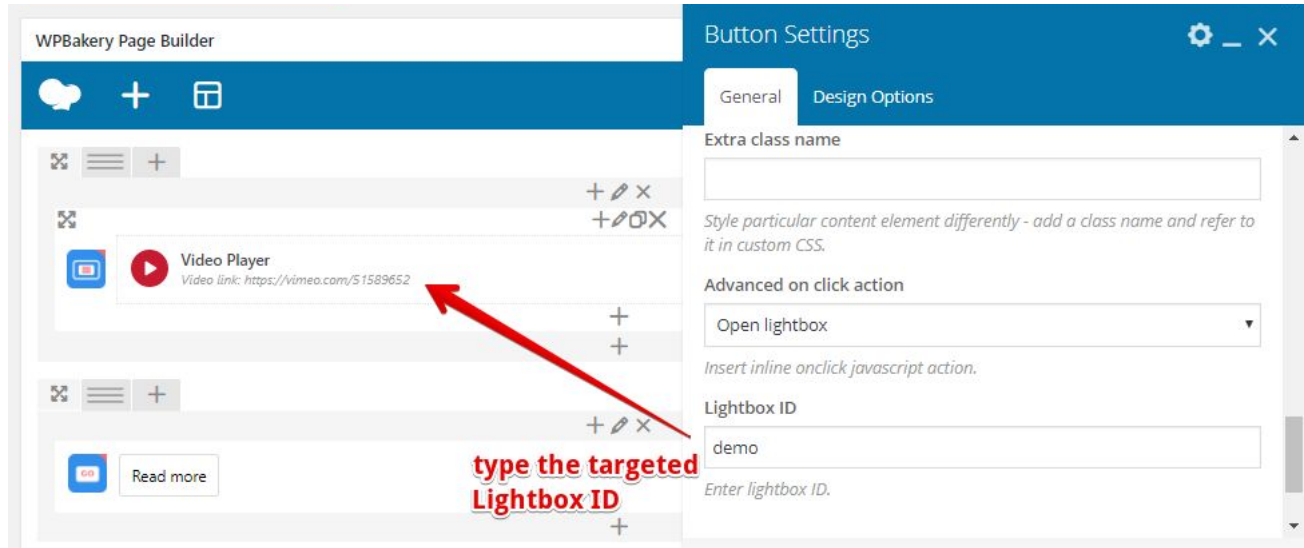

By default, the "Button" element of VCKit (located in *KIT Addons* tab) has a function to open a Lightbox.

Let's add a VCKit's Button:

In the "Button Settings", scroll down to the end and find "*Advanced on click action*" box, choose "*Open lightbox*".

The "*Lightbox ID*" field will appear, type the chosen Lightbox ID. (as example above: "demo").

Done. Now when clicking on this button , it will open the Lightbox with ID "demo" (the one has a video inside it).

- **Here is a tip!**

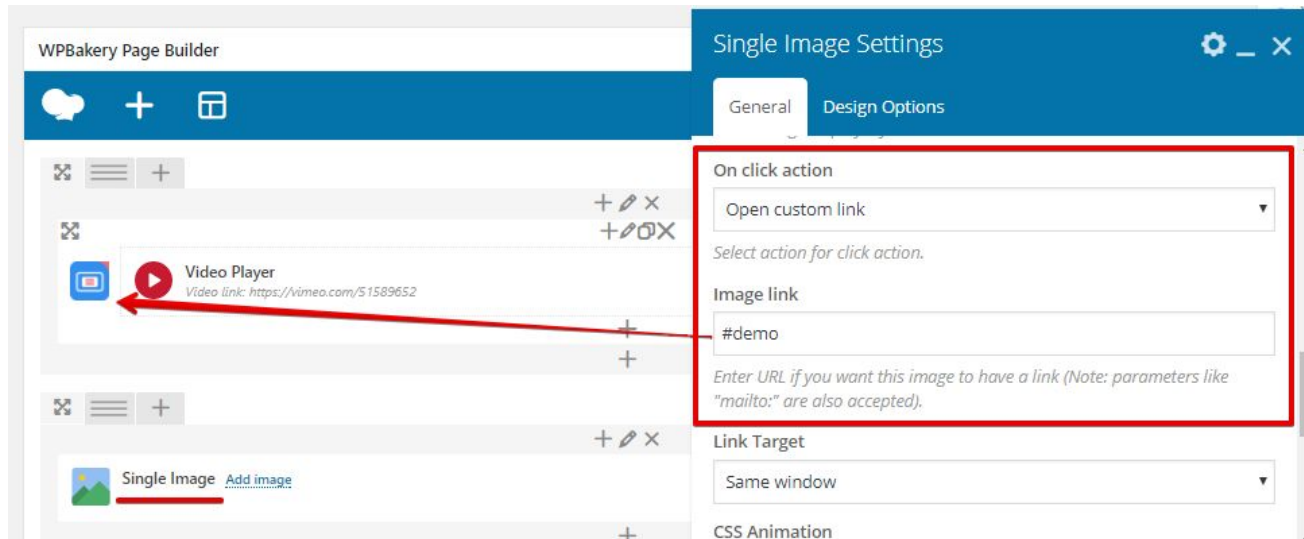

Beside VCKit's Button, you can make any other element to open VCKit's lightbox, as long as that element **has a function to "Open a Link"**.

Add an element which has option to open a link.

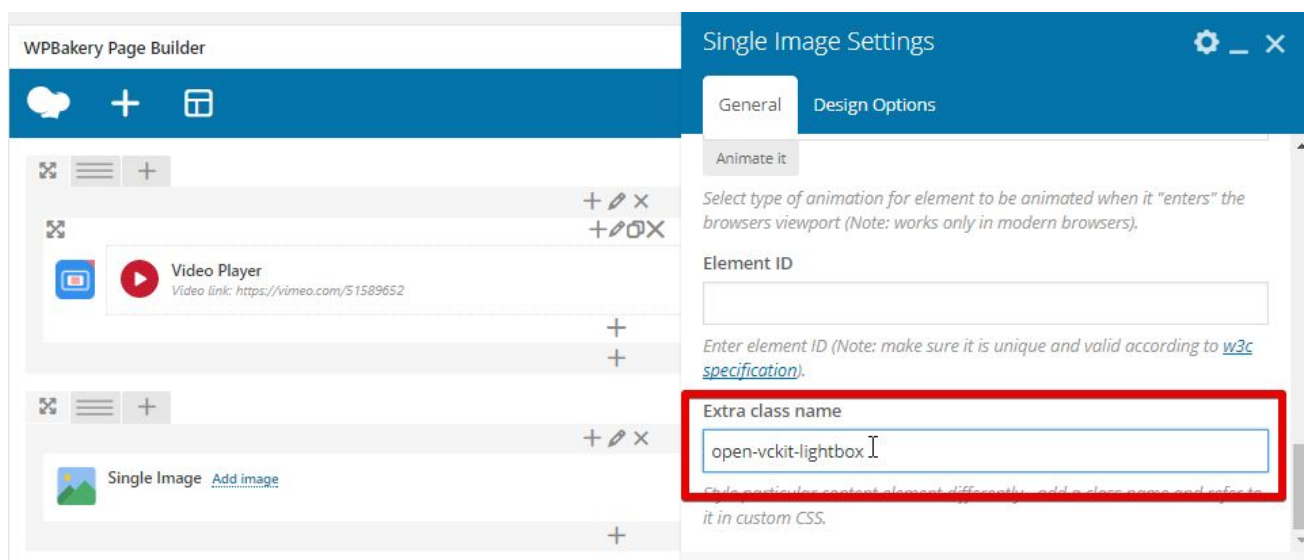

- Fill in the URL field: *#lightboxid* (remember to add # and remove *http*)
- Add extra class name: *open-vckit-lightbox*
- That's all steps to make this element open a Lightbox instead of a link.

For example:

Add a *Single image* > Set "*On click action*": "*Open custom link*" > Fill in the Image Link: *#demo*

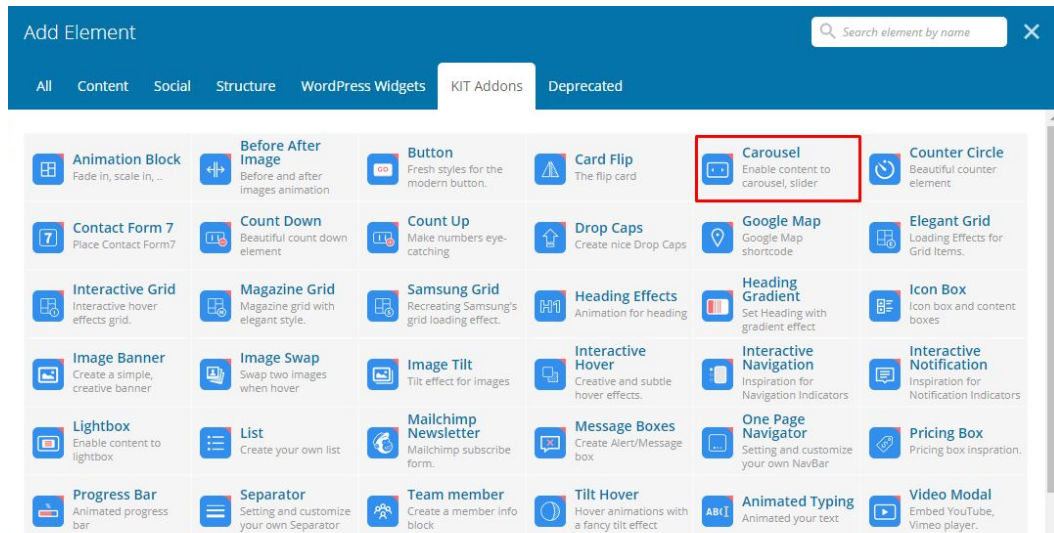

Add an extra class name in this Single image element: *open-vckit-lightbox*

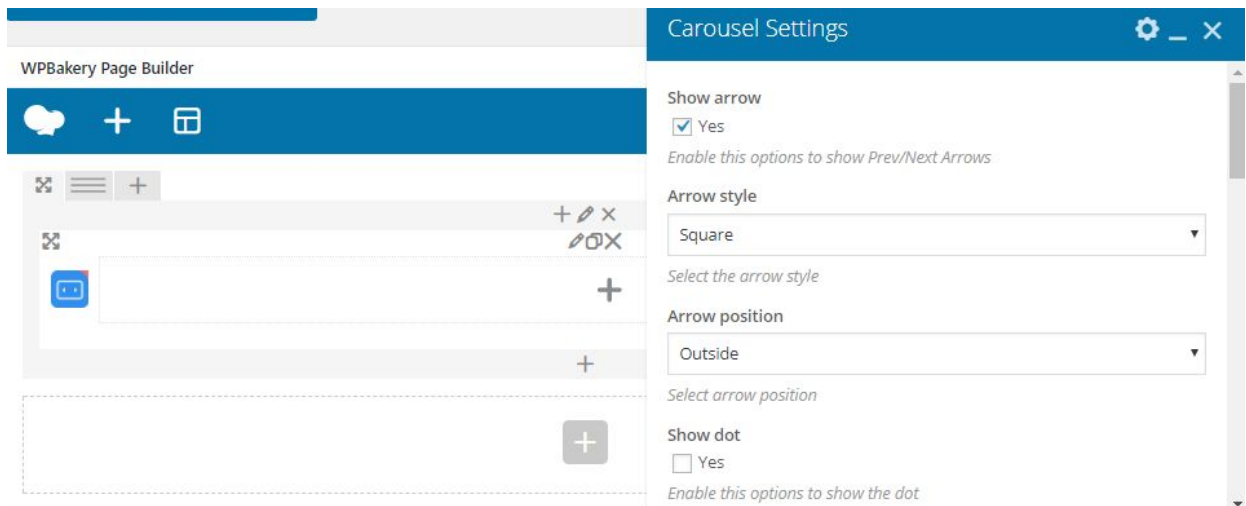

And you are done!

4. Carousel Slider

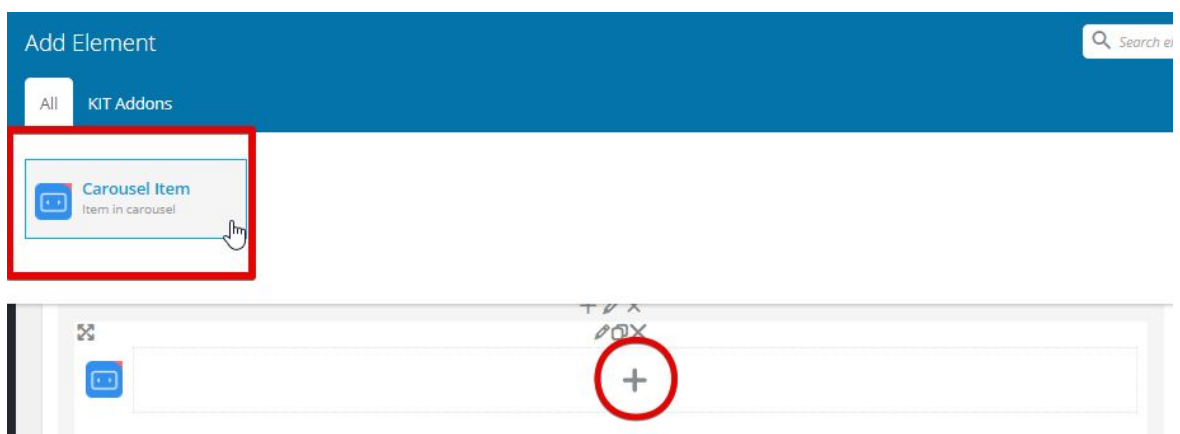

You can “Carousel anything” by using “Carousel” element.

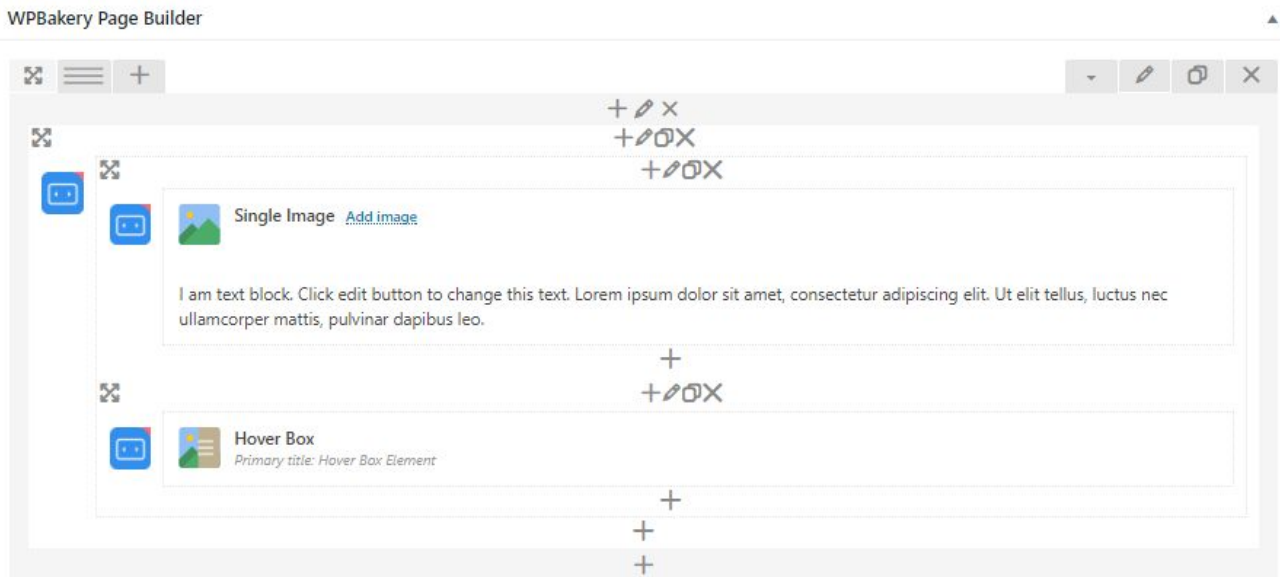

The Carousel Settings will show up for you to adjust all general settings of this carousel.

Click on “+” to add a Carousel Item.

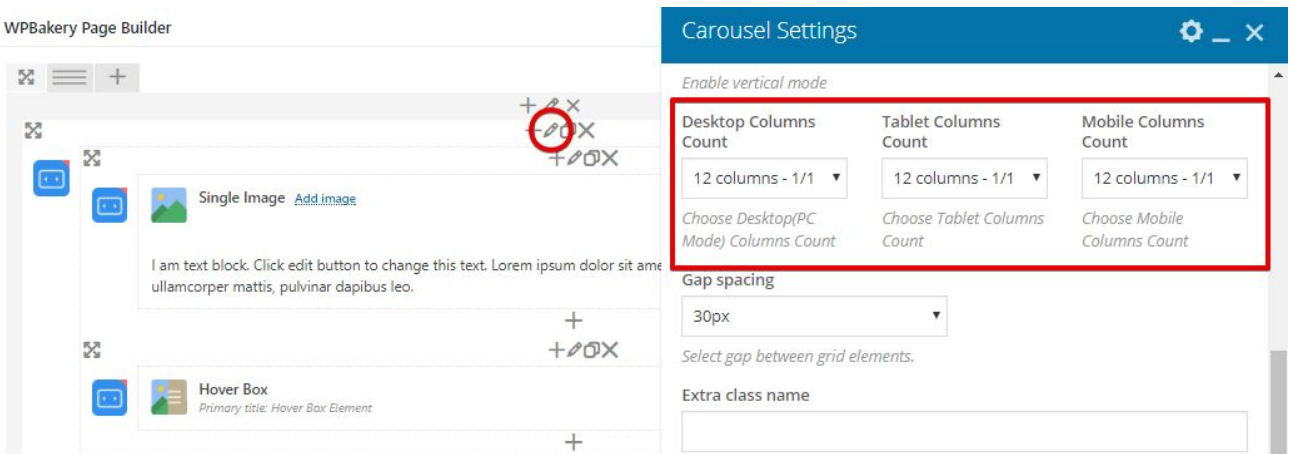

You can add an element to Carousel Item by clicking on “+” or drag an element into it.

Each item should be added in a Carousel Item.

You can always edit settings of this Carousel by clicking on the pencil symbol to show the “Carousel Settings”. In here, you can choose the number of item to show per row on each screen size.

5. Testimonial

Installing “Testimonials by WooThemes” can be done either by searching for “[Testimonials by WooThemes](#)” via the *Plugins > Add New* screen in your WordPress dashboard, or by using the following steps:

- Download the plugin via [WordPress.org](#).
- Upload the ZIP file through the *Plugins > Add New > Upload* screen in your WordPress dashboard.
- Activate the plugin through the ‘Plugins’ menu in WordPress
- Place `<?php do_action('woothemes_testimonials'); ?>` in your templates, or use the provided widget or shortcode.

Please watch our [tutorial video](#) for better understanding.

6. Icon Box

This element is actually [Elegant Icon Box](#), so you can watch [tutorial video](#) for more instruction.

7. Contact Form 7

Install [Contact Form 7](#) first to use this addon.

All VCKit form templates can be found in your package downloaded from [codecanyon](#). Extract the downloaded package and extract file **import.zip**, then find a file named: **visualcomposerkit.wordpress.xml** inside it.

8. Pricing Box

Please watch our [tutorial video](#) for better understanding.

9. Grids

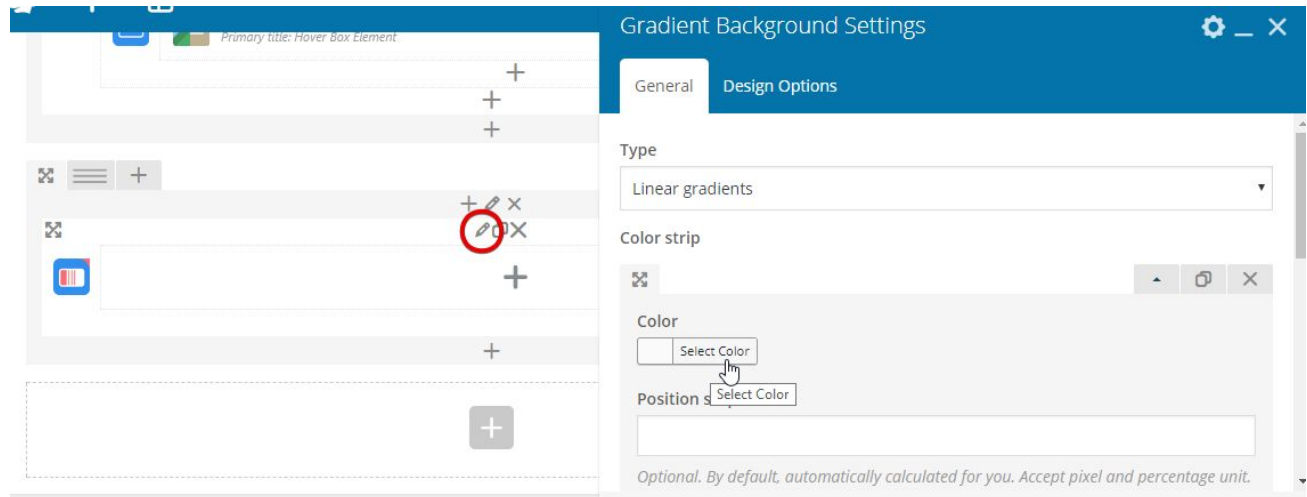

Our plugin includes 5 kinds of grid, click on each name below to watch its own tutorial video:

- [Samsung Grid](#)
- [Elegant Grid](#)
- [Interactive Grid](#)
- [Magazine Grid](#)
- [Google Grid](#)

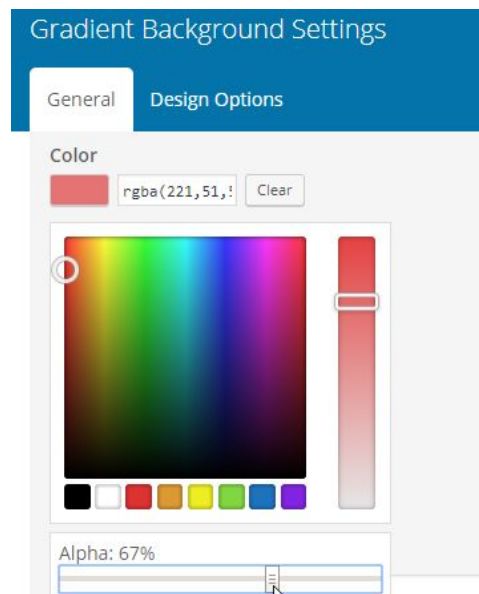

10. Gradient Background

It's a row background with gradient.

After adding “Gradient Background” element, the “Gradient Background settings” panel will appear. (you can always open its panel by clicking on the pencil symbol).

- There are 2 types of gradient: Linear or Radial.
- Add your color gradient in Color strip, you can add as many colors as you want and set the percentage of each color appearance.
- You can also choose Direction of Linear, or choose Shape of Radial.
- You can add an image background under the color gradient. (**Note** that the image is under the color, so you need to lower the opacity of each color to see the image)

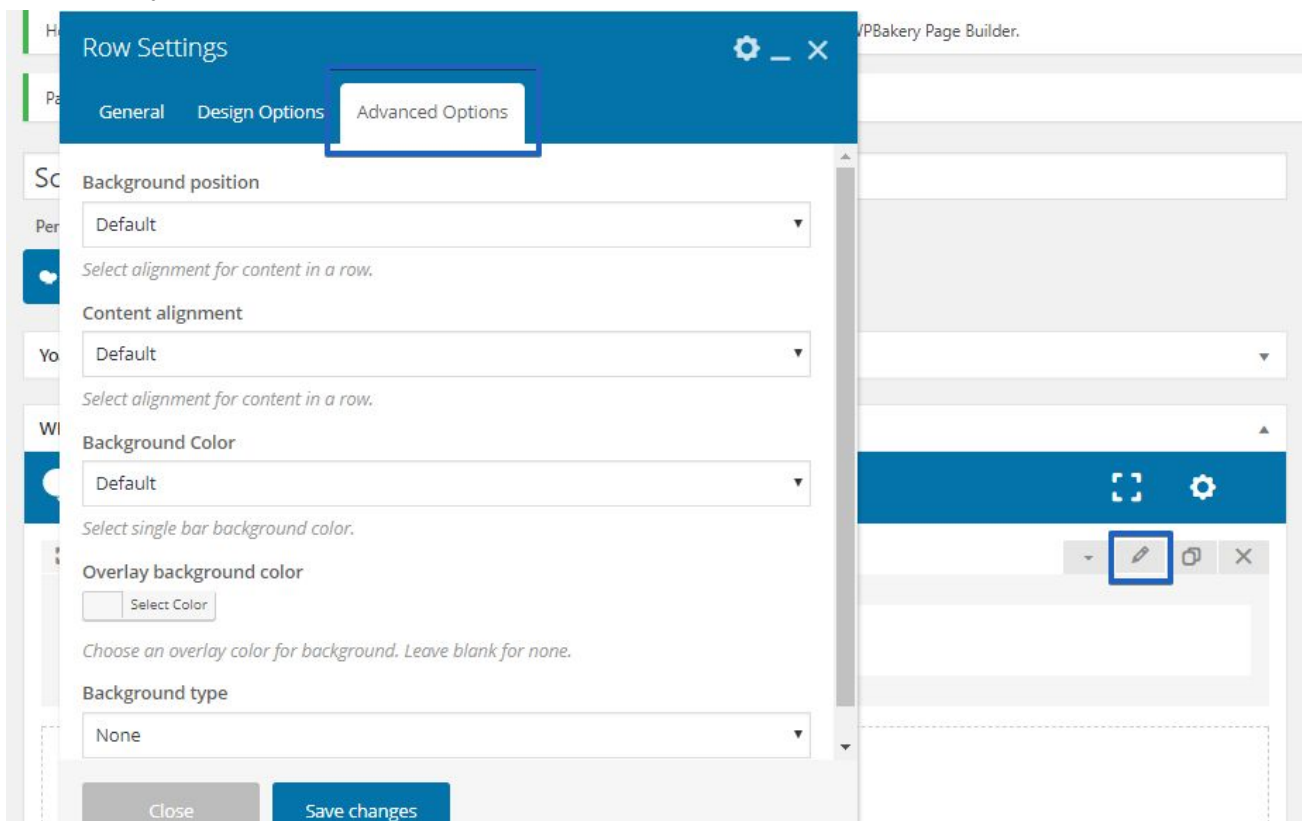

- After setting the Gradient color, you can add anything you want inside this background

11. Row Background

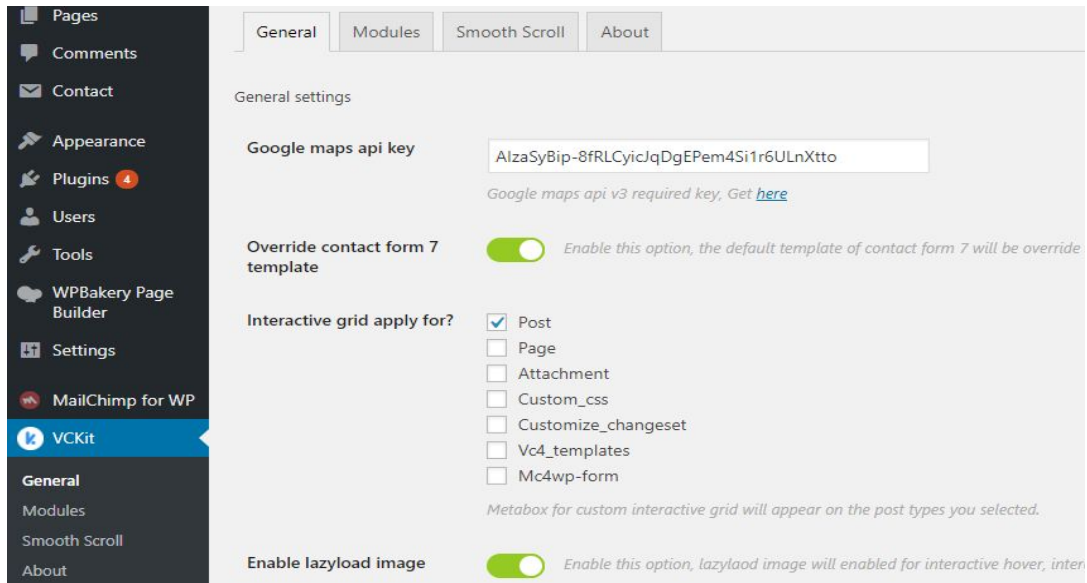

After activating VCKit, a new tab named “Advanced Options” will show up in Row settings (click on the pencil symbol to edit row).

IV. PLUGIN OPTIONS

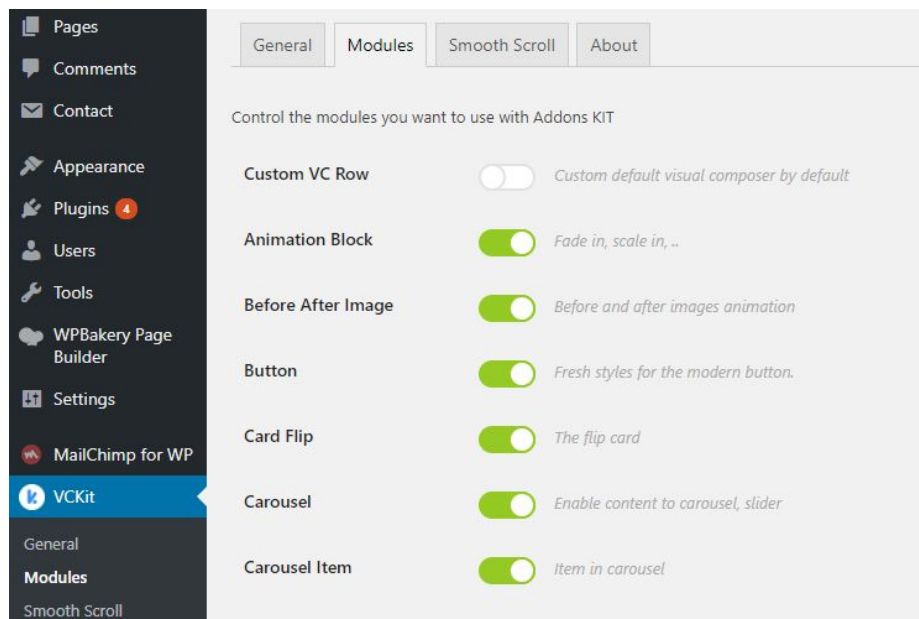

1. General

Hover to **VC Addons KIT** on the left panel of your dashboard.
There're some general options to config here.

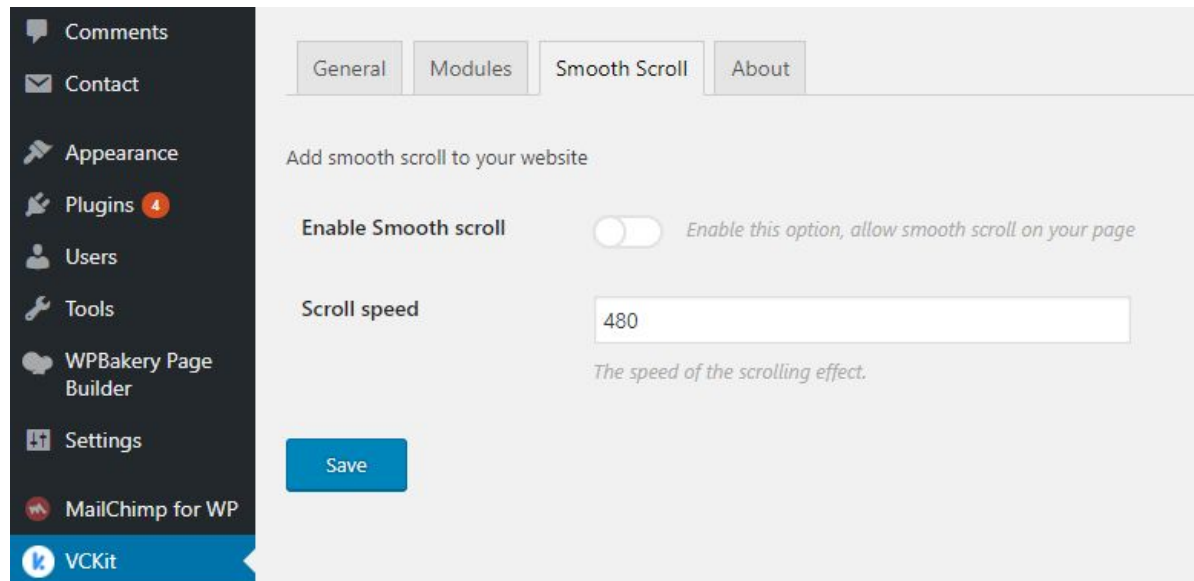

2. Modules:

Enable/disable shortcodes.

3. Smooth Scroll:

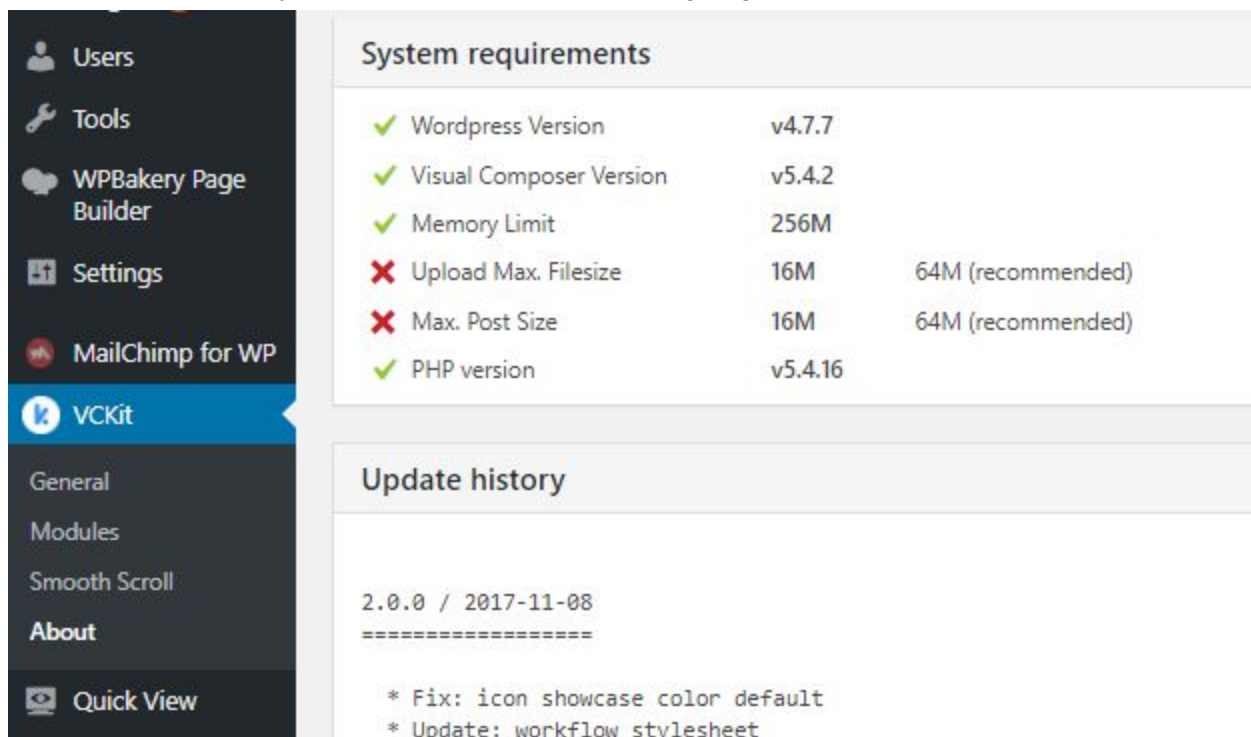

Add smooth scroll function to your site

The screenshot shows the VCKit settings interface. On the left is a dark sidebar with menu items: Comments, Contact, Appearance, Plugins (with a red badge showing '4'), Users, Tools, WPBakery Page Builder, Settings, MailChimp for WP, and VCKit (highlighted in blue). The main content area has four tabs: General, Modules, Smooth Scroll (active), and About. Below the tabs, the text 'Add smooth scroll to your website' is displayed. There is a toggle switch for 'Enable Smooth scroll' which is currently turned off, with a tooltip that says 'Enable this option, allow smooth scroll on your page'. Below this is a 'Scroll speed' input field with the value '480' and a tooltip that says 'The speed of the scrolling effect.' At the bottom left of the main area is a blue 'Save' button.

4. About:

All information about System Requirements and Changelog are here.

The screenshot shows the VCKit 'About' page. The left sidebar is identical to the previous screenshot, with VCKit highlighted. The main content area has two sections. The first section, 'System requirements', contains a table with the following data:

✓	Wordpress Version	v4.7.7	
✓	Visual Composer Version	v5.4.2	
✓	Memory Limit	256M	
✗	Upload Max. Filesize	16M	64M (recommended)
✗	Max. Post Size	16M	64M (recommended)
✓	PHP version	v5.4.16	

The second section, 'Update history', shows the version '2.0.0 / 2017-11-08' followed by a list of changes:

- * Fix: icon showcase color default
- * Update: workflow stylesheet

V. STAY UPDATE & SUPPORT

Thank you for purchasing our passionate work.

We're ceaselessly working hard to bring more features and better UX into each new version of VCKit. So make sure that you have followed all the steps below to get update email from Envato:

- On Codecanyon go to your profile > Settings > Email settings > Check the box "*Item update notifications*".
- Go to your [Downloads page](#), check the box "*Get notified by email if this item is updated*" of VCKit item.

That's all. Everytime we update a version, Envato will automatically send an email notification to you.

- Support:

If you have any question, please do not hesitate to use our support center:

<https://support.themelego.com>

Or send us a private email to support@themelego.com

We are happy to help!

Additionally, if you like VCKit, please [rate](#) it on the same Downloads page. We really wish to hear your feedback about our product.

It means a lot to us and gives us enormous motivation to deliver other great work to you.

Thank you and enjoy now!
